Hyacinths

Extra Select First-Size Bulbs Produce Stronger Spikes and Larger Flower Trusses

The Best Size for Beds, Borders and for Growing Indoors

Beautiful and Fragrant

Our First-Size Bulbs measure (18 to 19 Ctm.) 7 inches and over in circumference. They are the best and most satisfactory for out-door planting and for forcing in pots.

How to Grow Hyacinths

Outdoors: Plant bulbs during October and November in well drained garden soil, 4 to 5 in. deep and 6 in. apart each way.

Indoors: Use a 4 inch pot for 1 bulb and a 6 inch pot for 4 bulbs. A light rich soil is most suitable. Pot fairly firm and let the tip of the bulb just peep out of the soil. Water and place in a cool cellar or cold frame covering the pots with ashes or soil until thoroughly rooted. Never allow the bulbs to become dry. After eight weeks or until top growth of three inches has developed they should be ready to force in a cool, light room and after spikes are well developed they should be placed in regular room temperature. A succession of bloom may be had by bringing part of the planting into the light at a time as needed.

Tulips

The most popular of all Spring-blooming Bedding Plants.

DARWIN TULIP

How to Grow Tulips

Outdoors: Tulips do well in any good garden soil and can be planted anytime in the Autumn before the ground is closed by frost. Plant 4 to 5 in. deep and 5 to 6 in. apart each way.

Pot Culture: Plant the bulbs as early as possible, as upon the slow growth of the flower bud depends the success of the forcing. Plant 6 bulbs to a 6 in. pot in any good friable soil, allowing the tips of the bulbs to show above the soil. Water and place in a cold frame or heel-in in the garden covering the pots with ashes or soil and allow eight to ten weeks to force root development. Bring pots indoors as required and set in a cool, dark cellar. Never allow the bulbs to dry out. When an inch or more of top growth is made bring up to the light of a cool window, and subject them to gentle forcing. Never in a dry, warm atmosphere at the start.

KING ALFRED Giant Trumpet Daffodil

How to Grow Daffodils

Outdoors: Bulbs should be planted in good garden soil anytime in the Autumn so the roots may make good growth before the ground is frozen hard. Plant 4 to 6 in. deep and 6 to 8 in. apart each way.

Indoors: As a forcing bulb all the varieties of Daffodils and Narcissus do well. Plant 3 or 4 bulbs of the same variety in a 6 in. pot, using rich soil. Barely cover the bulbs with soil, water thoroughly and put in a cold frame or heel-in in the garden for eight to ten weeks to form root development before bringing indoors for winter blooming.

Narcissus and Daffodils in Mixture

A mixture of all types and varieties which are suitable for growing in masses for garden display. They are hardy and are particularly adapted for mixed borders, naturalizing in shrubbery in woods and semi-wild outlying grounds.....

Buy Buist's Lawn Grass Mixtures

September and October is the Best Time to Plant a Lawn

The fall season is the best time to sow Lawn Grass Seed. The soil is warm and friable, with plenty of moisture from dews and rains, which not only hastens germination but enables the roots to become well established before freezing weather sets in. Competition from weeds is less, and root growth is well established before Spring.

Our Lawn Mixtures are composed of the finest varieties of grasses, each of which has its season of beauty, and the result of this blending is the production of a sod that is always evergreen and velvety in appearance.
